

YouTube Video Support (Path B)

Videos are hosted on YouTube and managed entirely through Firestore. No Drive upload needed for videos. Images keep their current Drive workflow unchanged.

How It Works

```
YouTube (you upload there)
  ↓
Photo Tags admin → "Add YouTube Video" button
  → paste YouTube URL → tag people → Publish
  ↓
Firestore familyPhotoTags (same collection, same schema)
  { youtubeId: "dQw4w9WgXcQ", type: "video", people: [...], ... }
  ↓
Gallery reads both:
  • Drive files → images
  • Firestore records with youtubeId → YouTube videos
  ↓
Lightbox: YouTube embed player
Person profiles: filtered by peopleAliases (same as today)
```

Proposed Changes

Photo Tags Admin Panel

[MODIFY] [photo-tags.js](#)

New "Add YouTube Video" card rendered at the top of the grid (always visible, collapsed by default, expands when clicked):

- YouTube URL input (accepts full URL or video ID)
- Auto-fetches video title + thumbnail via YouTube oEmbed API (no API key needed)
- Same people-tagging chip UI
- "Save & Publish" writes to Firestore with:

```
json { "youtubeId": "dQw4w9WgXcQ",
  "youtubeThumbnail": "https://i.ytimg.com/vi/dQw4w9WgXcQ/hqdefault.jpg",
  "youtubeTitle": "Video title from YouTube", "type": "video", "source":
  "youtube", "people": [...], "peopleAliases": [...], "peopleLabels": [...],
  "personIds": [...], "albums": ["family"], "status": "approved", "approvedAt":
  serverTimestamp(), "updatedAt": serverTimestamp() }
```
- The Firestore document ID: `yt_${youtubeId}` (e.g. `yt_dQw4w9WgXcQ`) — avoids collision with Drive file IDs

Existing Drive video cards — keep working exactly as before. If a Drive video card also has a `youtubeId` already linked, show a small YouTube badge on the card.

New `parseYoutubeId(url)` helper — extracts the video ID from any YouTube URL format: - `https://youtu.be/dQw4w9WgXcQ` - `https://www.youtube.com/watch?v=dQw4w9WgXcQ` - `dQw4w9WgXcQ` (bare ID)

[MODIFY] [photo-tags.html](#)

Add CSS for: - `.fd-yt-add-card` — the "Add YouTube Video" card at the top of the grid - `.fd-yt-preview` — thumbnail preview that appears after URL is parsed - `.fd-yt-badge` — small YouTube badge on Drive video cards that have been linked

Family Gallery

[MODIFY] [smart-family-gallery.js](#)

`resolveGalleryFiles()` — merge two sources: 1. Drive folder files (images only — filter out video mimeTypes since videos now come from YouTube) 2. Firestore `familyPhotoTags` records where `source === 'youtube'` and `status === 'approved'`

Both lists are merged and sorted by date (`approvedAt` for YouTube videos, file `createdTime` for Drive images).

`showItem()` in **lightbox** — detect YouTube vs image:

```
if (file.youtubeId) {
  // YouTube embed
  video.src = `https://www.youtube.com/embed/${file.youtubeId}?autoplay=1&rel=0`;
  video.style.display = 'block';
  img.style.display = 'none';
} else {
  // Drive image (existing behavior)
}
```

Thumbnail for YouTube videos — use `file.youtubeThumbnail` (stored in Firestore) for the grid thumbnail, falling back to `https://i.ytimg.com/vi/${youtubeId}/hqdefault.jpg`.

[MODIFY] [family.html](#)

The existing `<iframe id="lightboxVideo">` already works for YouTube embeds — no HTML change needed here. Just the JS logic above.

Person Profile Galleries

[MODIFY] [smart-family-gallery.js](#)

When `mode === 'person'`, `resolveGalleryFiles()` already filters by `peopleAliases`. YouTube video Firestore records have the same `people` / `peopleAliases` fields as photo records, so they will automatically appear on the correct person's profile page with zero additional changes.

Firestore Structure

No new collection needed. YouTube videos go into the existing `familyPhotoTags` collection with `source: 'youtube'` and `youtubeId` fields. The gallery query already reads all approved records from this collection.

Existing Drive image records are unaffected.

Verification Plan

Manual Verification

- Paste a YouTube URL → video ID parsed, title + thumbnail loaded ✓
 - Tag people → chip UI works identically to photo cards ✓
 - Press Save & Publish → Firestore record created with `youtubeId` ✓
 - Open Family Gallery → YouTube video appears in the grid with thumbnail ✓
 - Click video in gallery → YouTube player opens in lightbox, streams immediately ✓
 - Open a person's profile gallery → YouTube videos they are tagged in appear ✓
 - Existing Drive images unaffected ✓
-

Open Questions

IMPORTANT

Existing Drive videos: Videos already uploaded to Drive and tagged will still appear in the gallery using the Drive preview iframe (as today). Do you want to keep them showing, or should Drive videos be hidden from the gallery going forward (forcing everything through YouTube)?

[!NOTE] **YouTube privacy:** Videos set to "Unlisted" on YouTube will still embed and play correctly everywhere — they just won't appear in YouTube search results. Public videos are fine too. Private videos cannot be embedded.
